Atmos
by CallCabinet

Atmos is our hosted call recording and quality management platform, designed with Skype for Business Call Recording in mind. With Atmos, customers can easily subscribe and manage their recordings right from our web portal, making easy to search, review and evaluate both voice and screen recordings. Atmos is very affordable, requiring no initial investment and low monthly service costs that make it easy to deploy throughout your organization.

We offer three types of Skype for Business integration, depending upon the size of your company and the type of Skype for Business deployment you have. Whether it's a hosted Office365, private cloud Skype for Business or on-premise deployment, Atmos can serve all of your needs. Atmos is capable of recording all types of Skype

for Business calls including external, remote users, cloud users, mobile users, conference calls, federated users, as well as regular Skype calls!

No matter how your network is configured, the Atmos Skype for Business Call Recording solutions will fit your needs!

Regulatory legislation requires that some companies who provide services or financial transactions over the phone, to record conversations. With Skype for Business or Office365 this can lead to costly in-house recording systems that have a fixed configuration and require a significant up front investment. Atmos eliminates this by offering secure, encrypted recordings that are stored and accessed from the cloud, making it easy to meet regulatory compliance laws throughout your organization
